SUMMARY

I am a student with experience in Full Stack Development, Backend Development, and Cloud technologies. Skilled in Python, Django, Django REST Framework, JavaScript, MySQL, Docker, Linux, Git, and REST API development. Built a production-inspired Pharmaceutical Inventory Management ERP featuring JWT authentication, role-based access control, multi-warehouse inventory, batch tracking, audit logging, stock allocation, and recall management. Passionate about designing scalable backend systems, cloud infrastructure, and modern software solutions.

EXPERIENCE

Full Stack Python Developer Intern

Smart Access

February 2026 - May 2026, Thane

- Developed a Pharmaceutical Inventory Management ERP using Django REST Framework, MySQL (Docker), JavaScript, HTML, CSS, and Bootstrap.
- Designed REST APIs and implemented JWT authentication with role-based access control.
- Built modules for inventory, batch tracking, warehouse management, stock allocation, stock transfers, recall management, audit logs, and analytics dashboard.
- Collaborated on backend architecture, database design, and responsive ERP interfaces.

DevOps Intern

Okisna IT Solutions

September 2025 - February 2026, Vashi, Navi Mumbai

- Orchestrated **containerized applications using Kubernetes**, deploying and managing **Pods and Services** to ensure service availability and fault isolation.
- Set up and managed a **Kubernetes cluster on a cloud-based EC2 instance**, deploying platforms including **Portainer, Appwrite, ntfy.sh, Kubernetes Dashboard, and n8n**.
- Implemented **NGINX-based ingress and reverse proxy configurations**, exposing Kubernetes services through custom domains.
- Secured externally exposed services by configuring **SSL/TLS certificates using Certbot**, enabling HTTPS access across all platforms.
- Architected backend infrastructure using **Appwrite**, implementing secure authentication workflows and structured database management.
- Provisioned, monitored, and maintained **AWS EC2 cloud resources**, ensuring stable performance and operational reliability.
- Administered **Linux environments**, performing service management, log analysis, and system troubleshooting using command-line tools.

PROJECT

Pharmaceutical Inventory Management ERP

Smart Access • github.com/surajbhavake/Pharma-Inventory-Multi-Warehouse-System • February 2026 - May 2026

- **Tech Stack:** Django, Django REST Framework, MySQL (Docker), JavaScript, Bootstrap, HTML, CSS
- Built a multi-warehouse pharmaceutical inventory system with batch-level tracking and real-time stock management.
- Implemented secure JWT authentication, role-based access control (Admin, Warehouse Manager, Staff, Auditor), audit logging, and recall workflows.
- Developed transaction-safe stock allocation and warehouse transfer features to maintain inventory consistency.
- Designed a normalized relational database with UUID-based entities and an immutable stock movement ledger.

Job Portal Platform

September 2025 - February 2026

- Designed, deployed, and operated a **cloud-hosted job portal platform** with **Candidate, Recruiter, and Admin applications** on **AWS EC2**. Built and managed Linux-based cloud infrastructure, including **server provisioning, service isolation using Docker, and secure application hosting via CyberPanel**.
- Deployed and operated **Appwrite** as a managed backend service for authentication and database operations, and integrated **ntfy.sh** for real-time cloud service notifications. Implemented **reverse proxy architecture** to expose multiple services securely over HTTP/HTTPS, ensured service availability, optimized resource usage, and handled day-to-day cloud operations and monitoring.

EDUCATION

Master in Computer Application

NCRD's Sterling Institute of Management Studies • Nerul, Navi Mumbai • 2026

Bachelor of Science in Information Technology

Tilak College • Vashi, Navi Mumbai • 2024 • 8.28

CERTIFICATIONS

Python

Infosys Springboard • 2025

React BootCamp

SKILLS

Django, React,AWS EC2, Linux, Docker, Cloud Networking Basics, Git,Kubernetes
